Banco Atlas

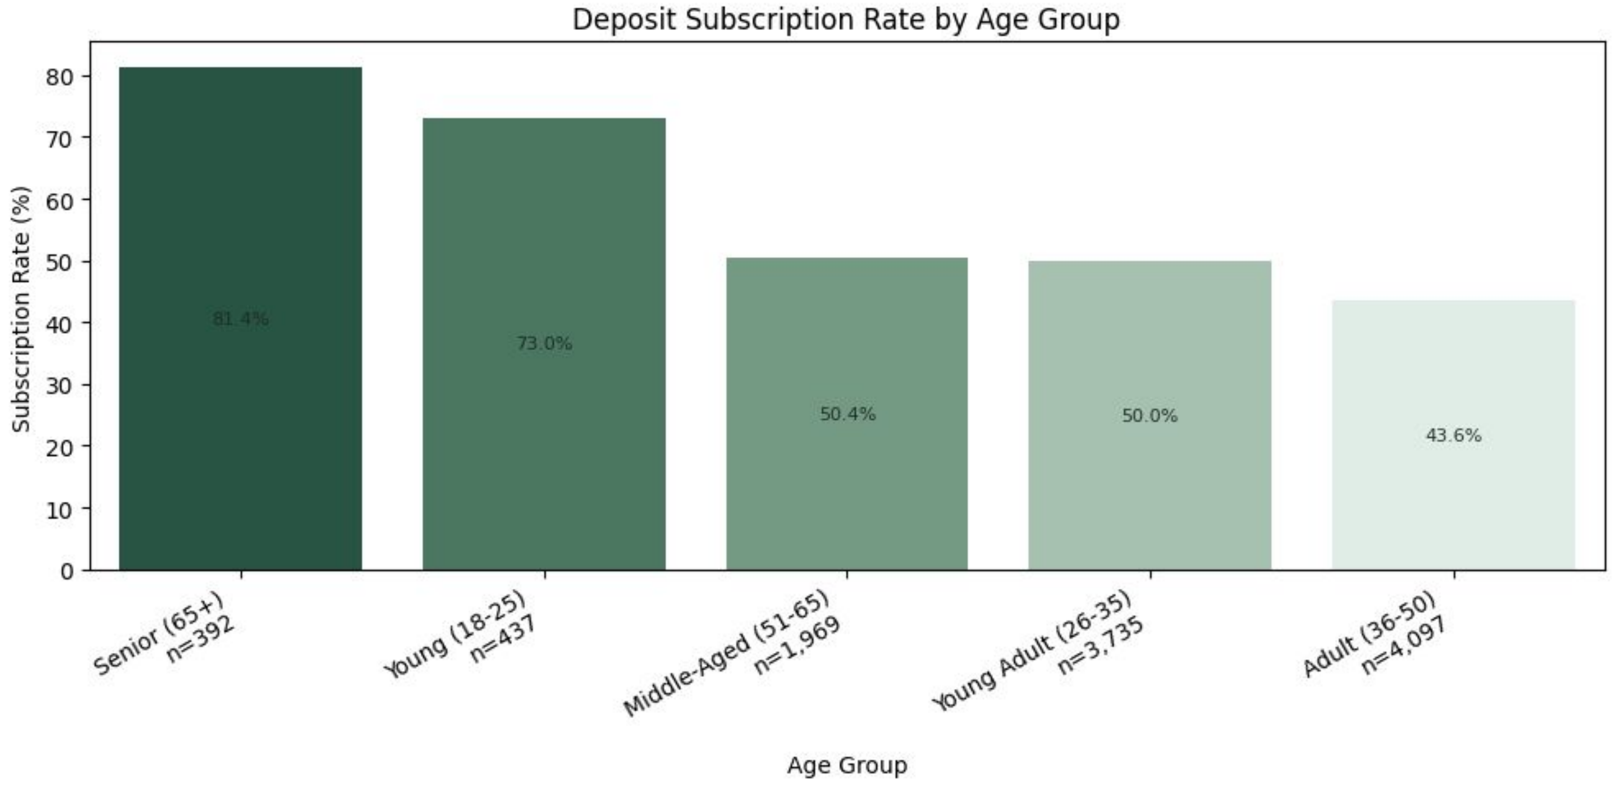
# Customer Profile Objective

Which combination of demographic characteristics is associated with the highest deposit subscription rate?

Age    Job    Education    Marital Status

Individual demographic variables are analyzed first and then combined to identify customer segments with the highest subscription rates.

# Age

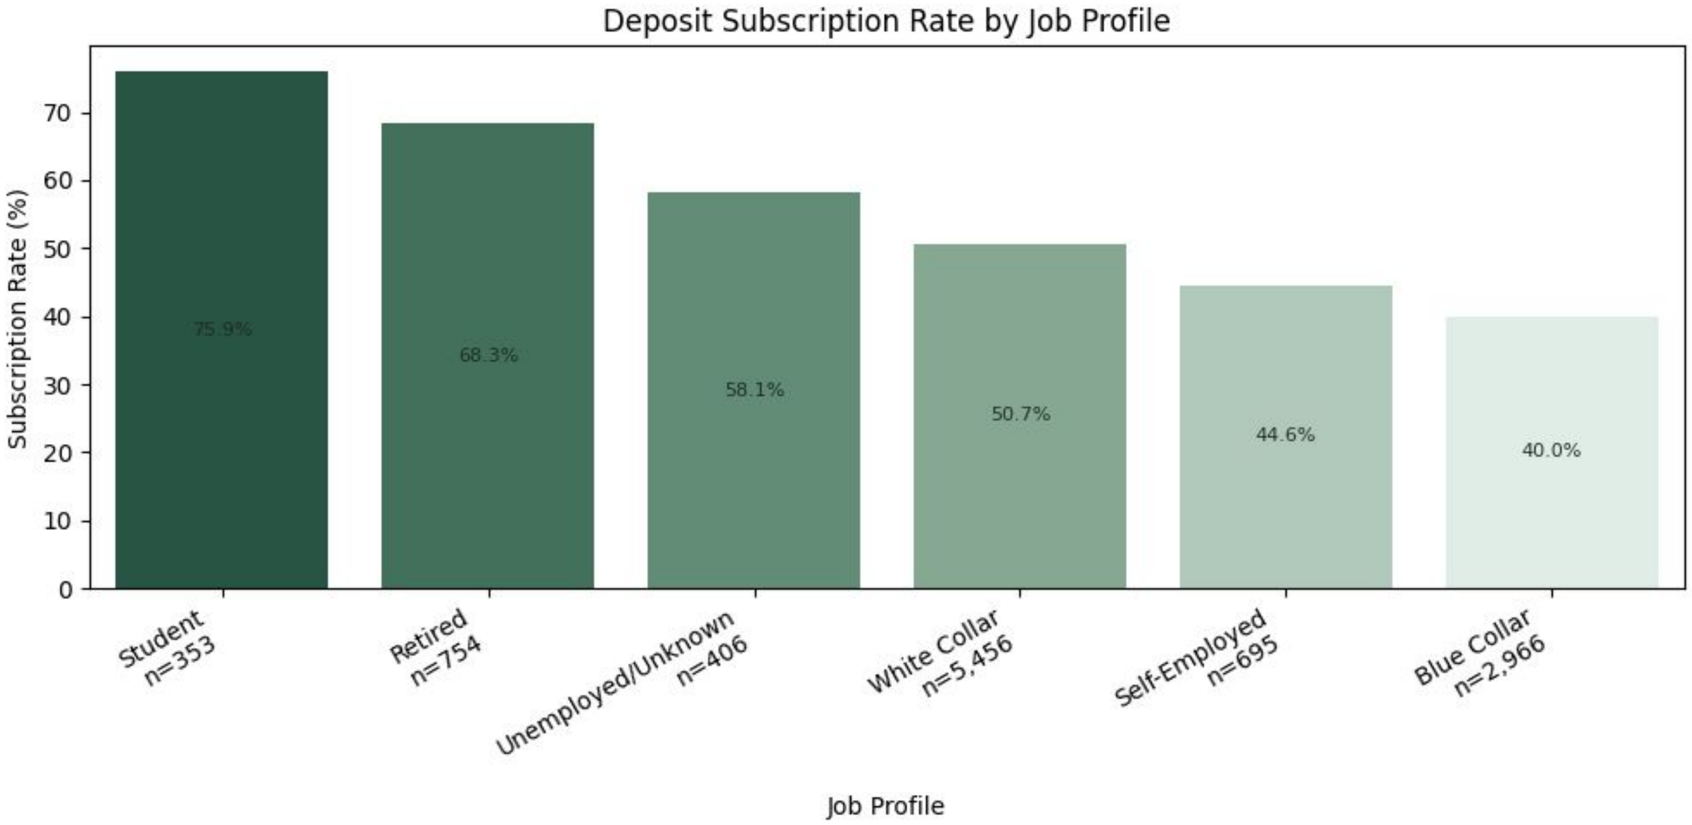


**Key findings**

- Senior customers show the highest subscription rate
- Young customers also outperform the overall average
- Adults aged 36–50 are the least likely to subscribe

Banco Atlas

# Job Profile

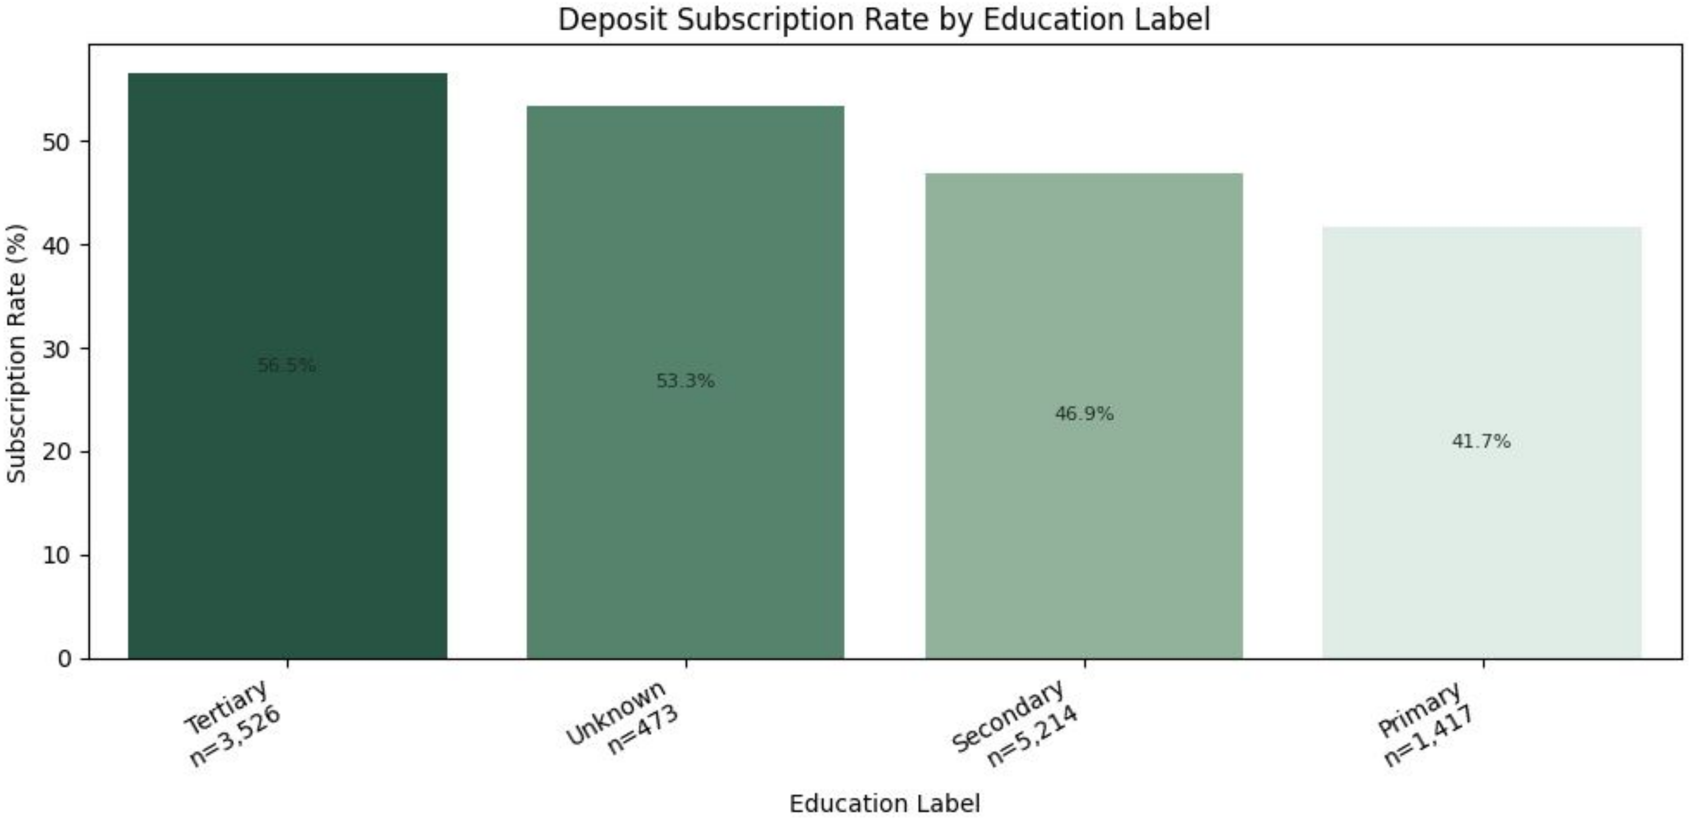


**Key findings**

- Students show the highest subscription rate (75.7%)
- Retired customers also exhibit a strong propensity to subscribe (68.8%)
- Blue-collar occupations record the lowest subscription rate (39.9%)

Banco Atlas

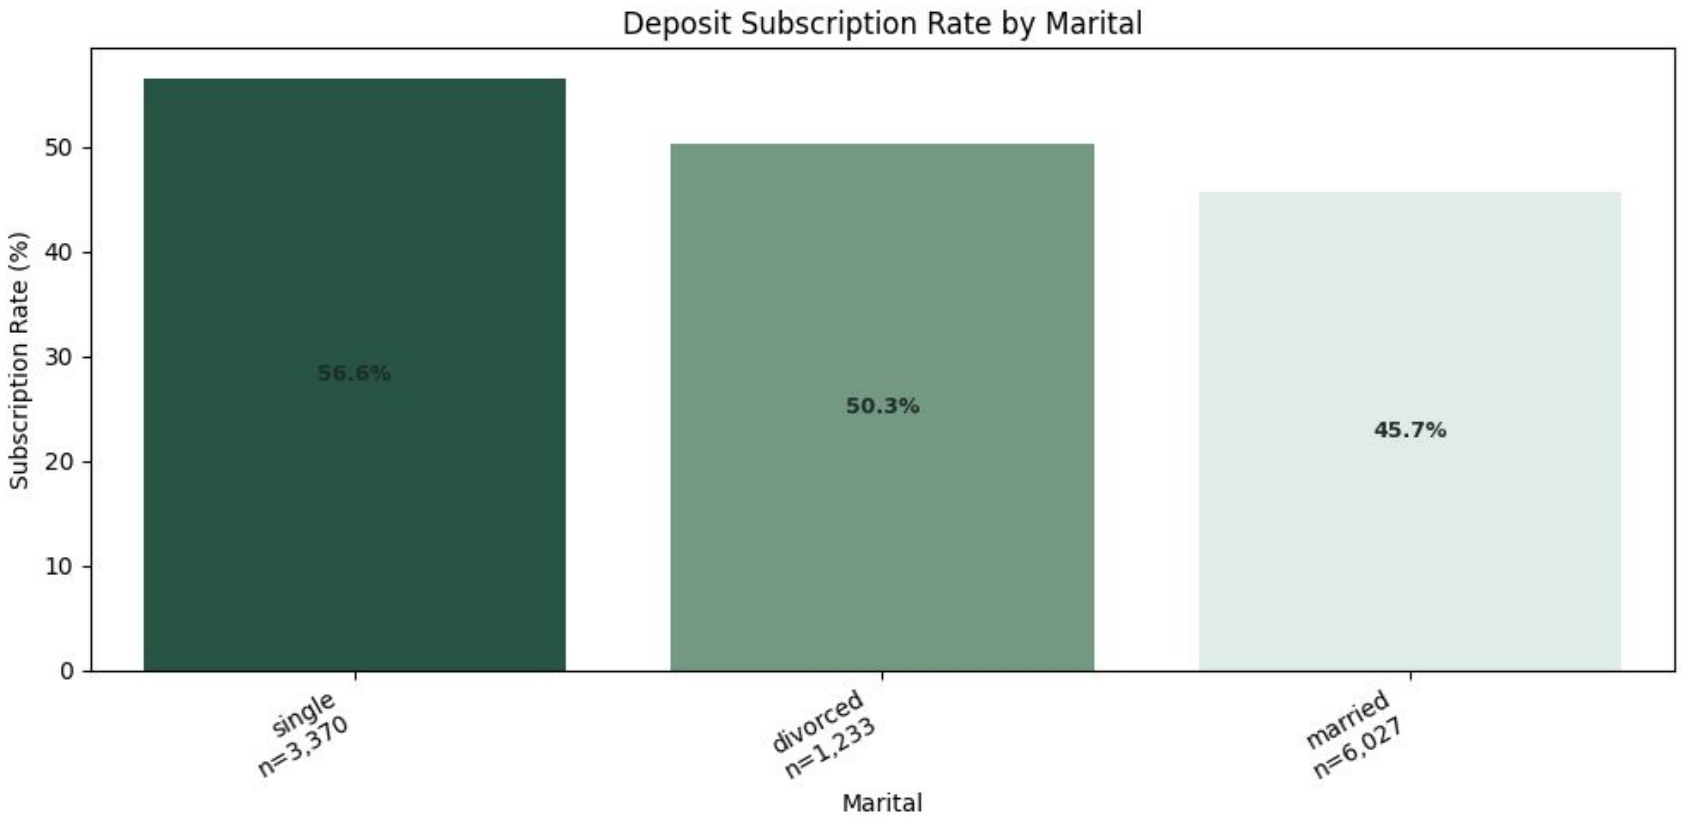
# Education



## Key findings

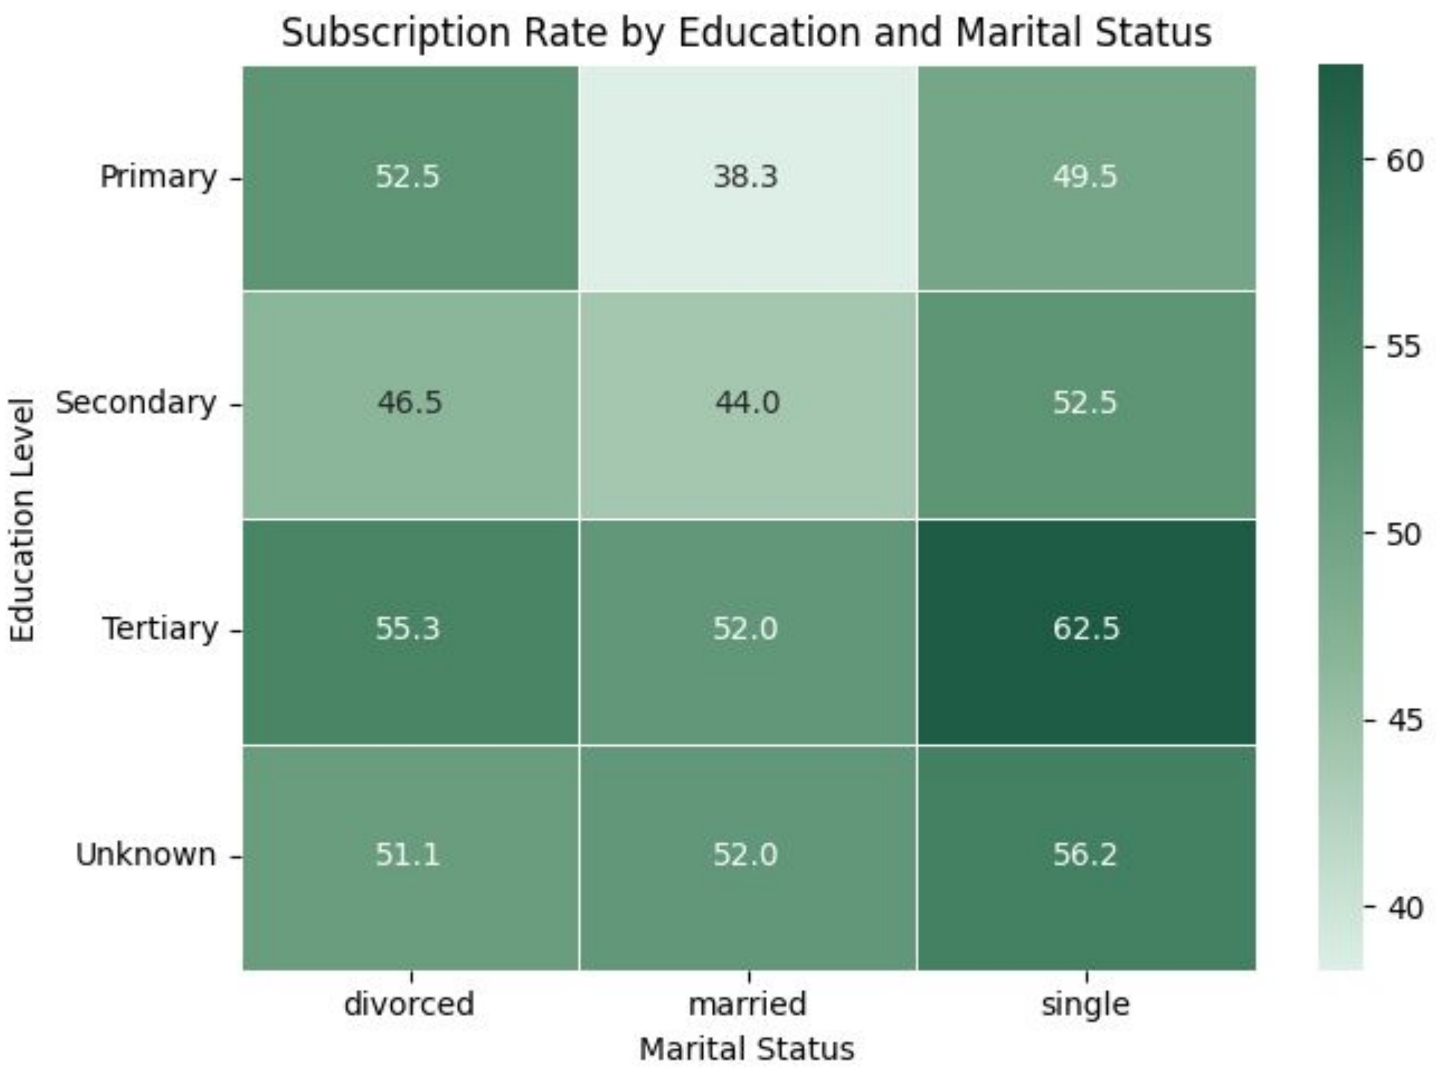
- Customers with tertiary education show the highest subscription rate
- Primary education slightly outperforms secondary education
- Secondary education records the lowest conversion rate

# Marital Status



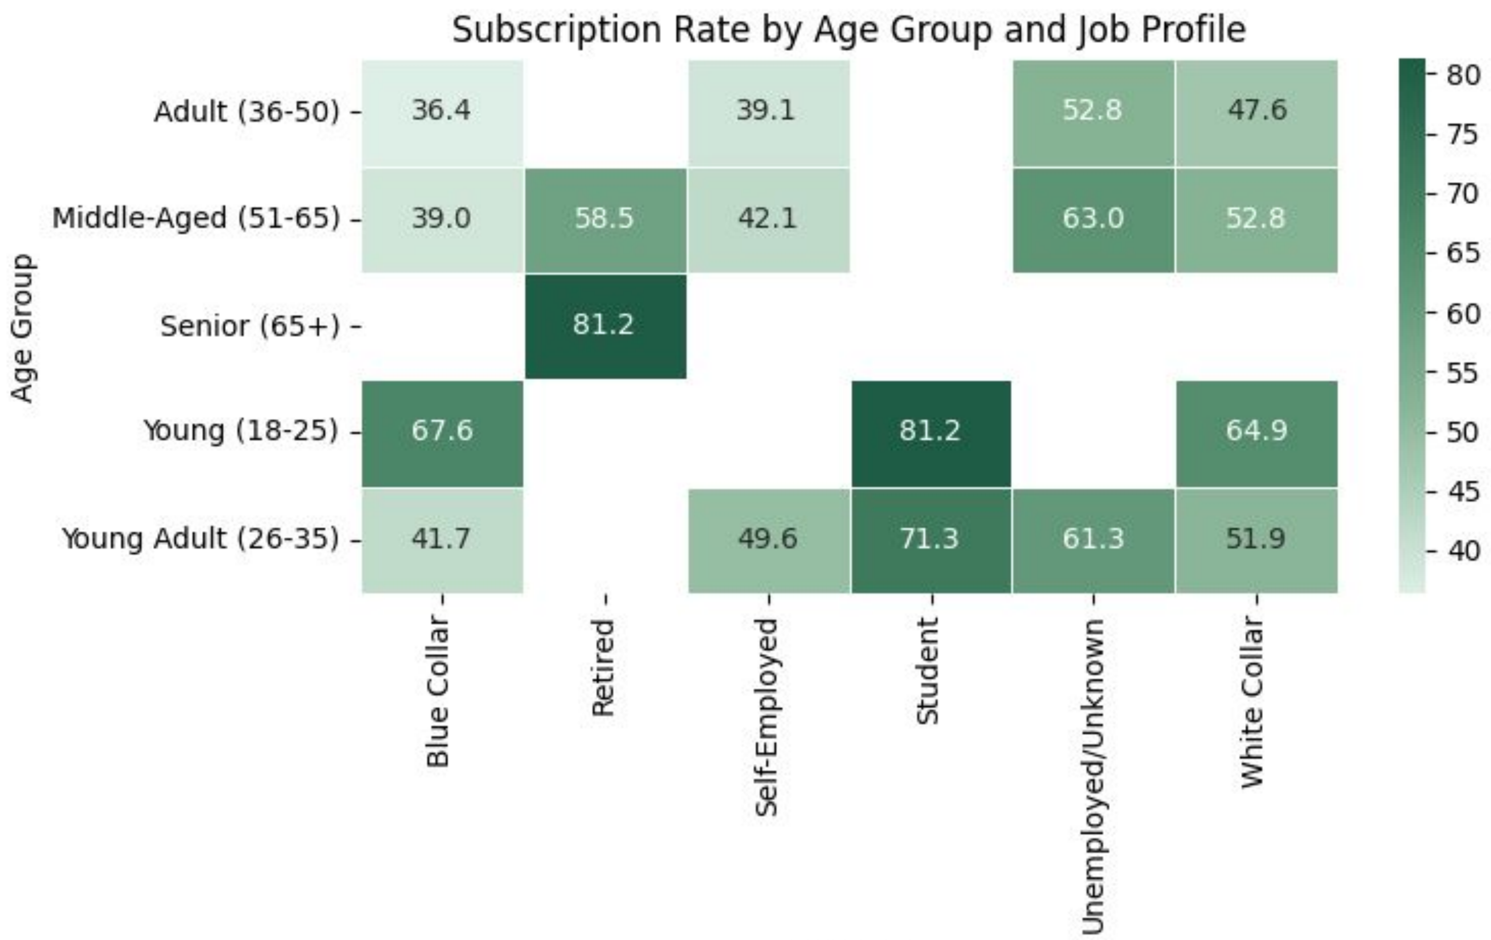
**Key findings**

- Single customers exhibit the highest subscription rate
- Divorced customers perform close to the overall average
- Married customers show the lowest propensity to subscribe



## Key Findings:

- Subscription rates tend to increase with higher education levels, especially among single customers.
- Married customers with primary or secondary education show the lowest conversion rates, while single customers with tertiary education exhibit the highest subscription rate (62.5%).



## Key finding

- Students and retired customers consistently present the highest subscription rates, whereas operational occupations remain the weakest-performing group across most age segments.

Cells with missing values represent combinations with insufficient observations and were excluded from interpretation.

Banco Atlas

# Conclusions

### Key Finding

Young students and retired seniors represent the strongest age-occupation profiles.

### Business Action

Prioritize these profiles for deposit campaigns and personalized offers to maximize conversion.

### Key Finding

Single customers with tertiary education show the highest subscription rates among education-marital status profiles.

### Business Action

Target highly educated single customers with personalized deposit products and premium offers.

### Key Finding

Middle-aged adults and blue-collar workers represent the lowest-performing age-occupation profiles.

### Business Action

Develop tailored campaigns and value propositions to improve engagement within lower-response customer segments.

### Key Finding

Combining demographic variables reveals customer profiles hidden in individual analyses.

### Business Action

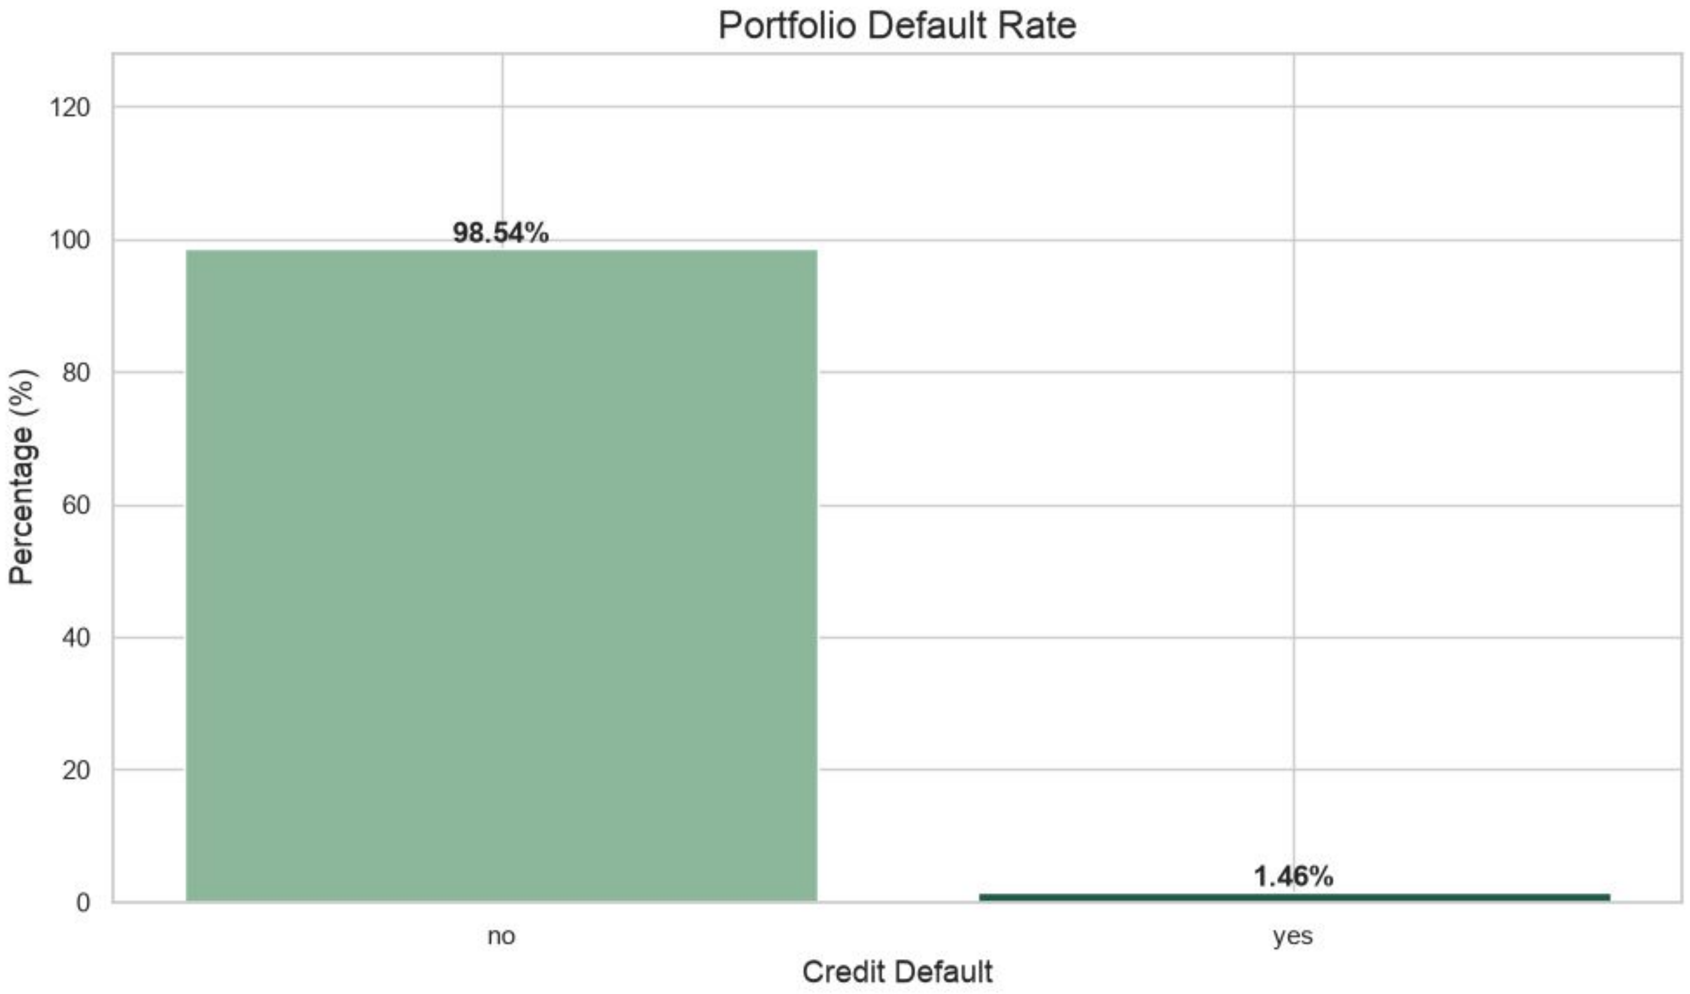
Use profile-based segmentation to improve campaign targeting and marketing efficiency.

Banco Atlas

# Finance and Credit Risk Objective

To what extent are customers with lower account balances at a higher risk of credit default, and how should we adjust our credit policies to mitigate this risk?

# Baseline Default Rate

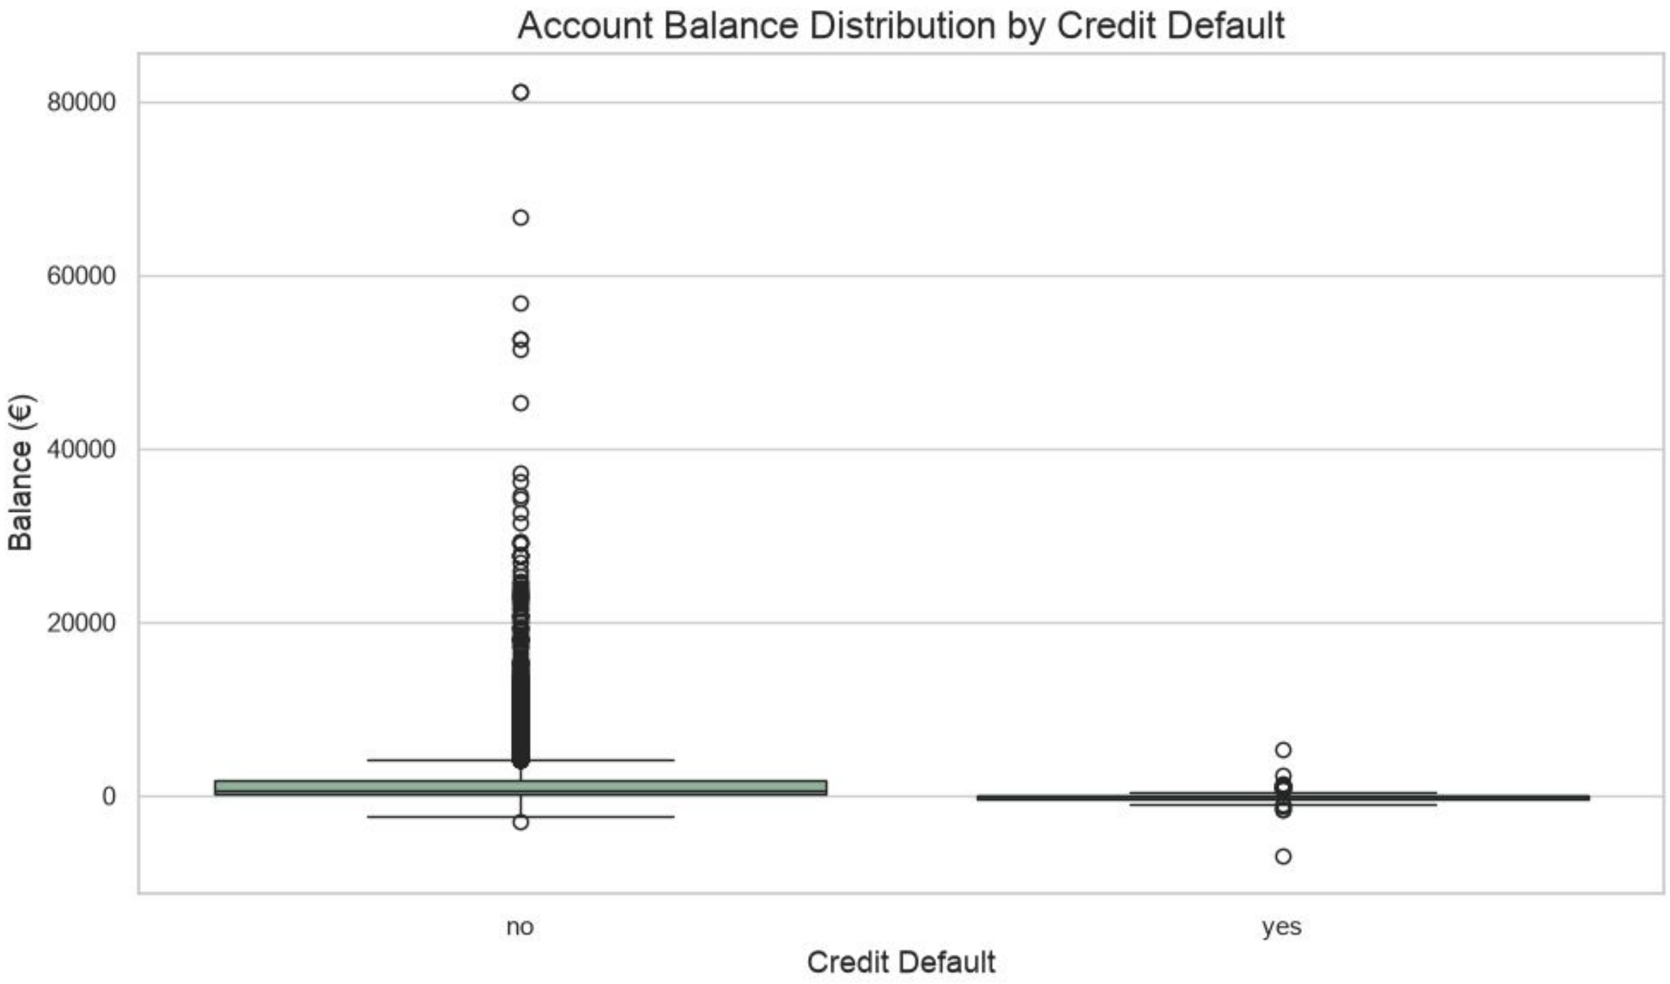


**Key finding:**

- Low global risk: Only 1.5% default rate across the portfolio.

Banco Atlas

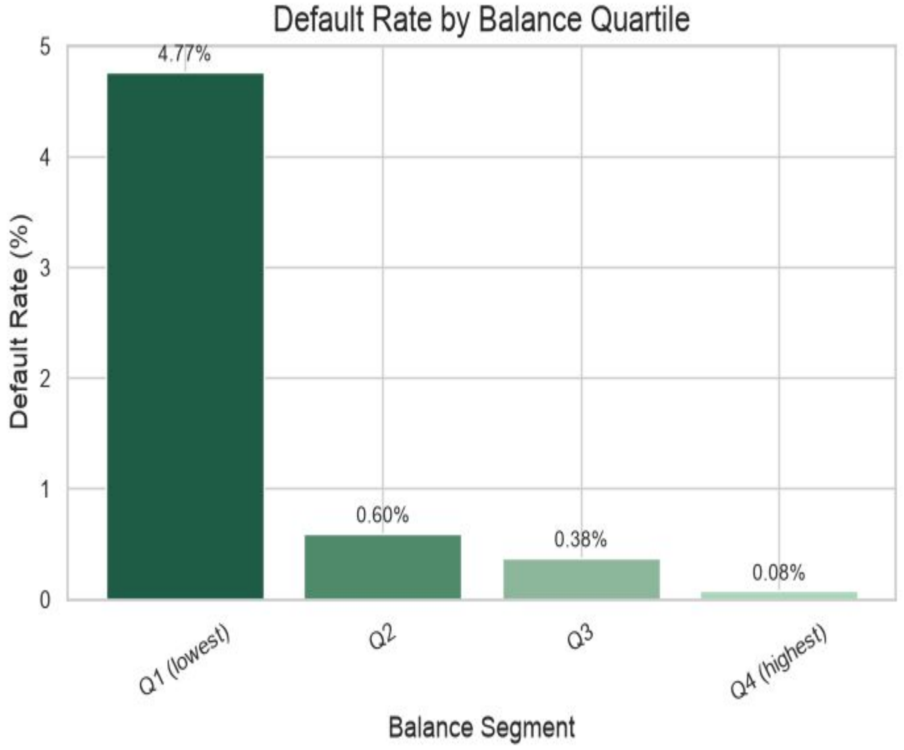
# Balance vs Credit Default

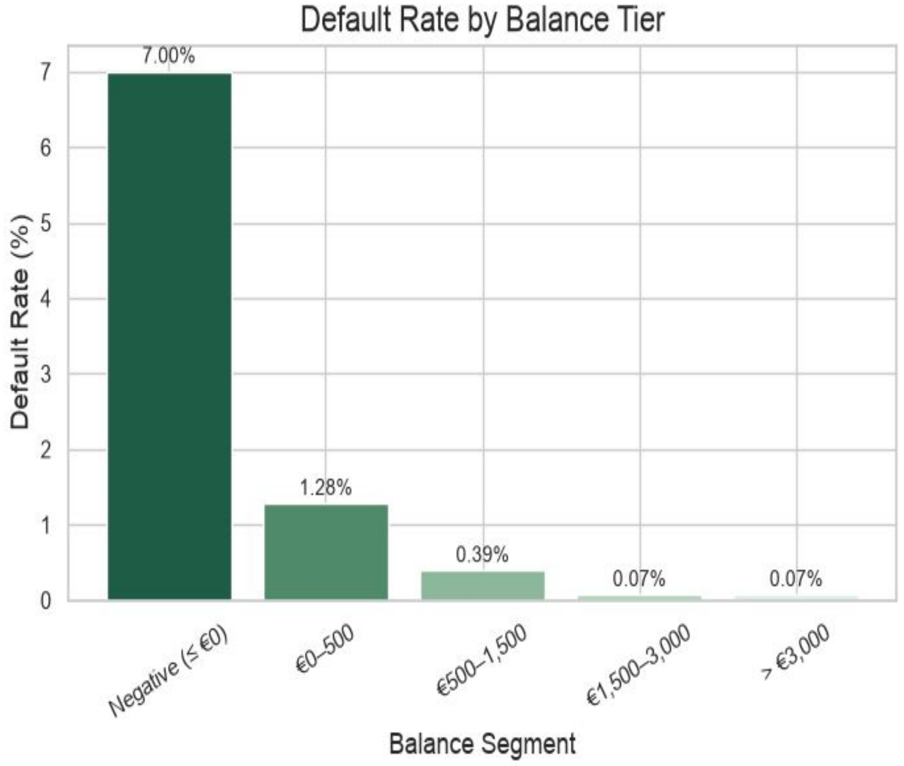


**Key finding**

- Negative balances in defaulting accounts signal the need for immediate risk triggers before balances hit zero

# Default Rate by Balance Segment

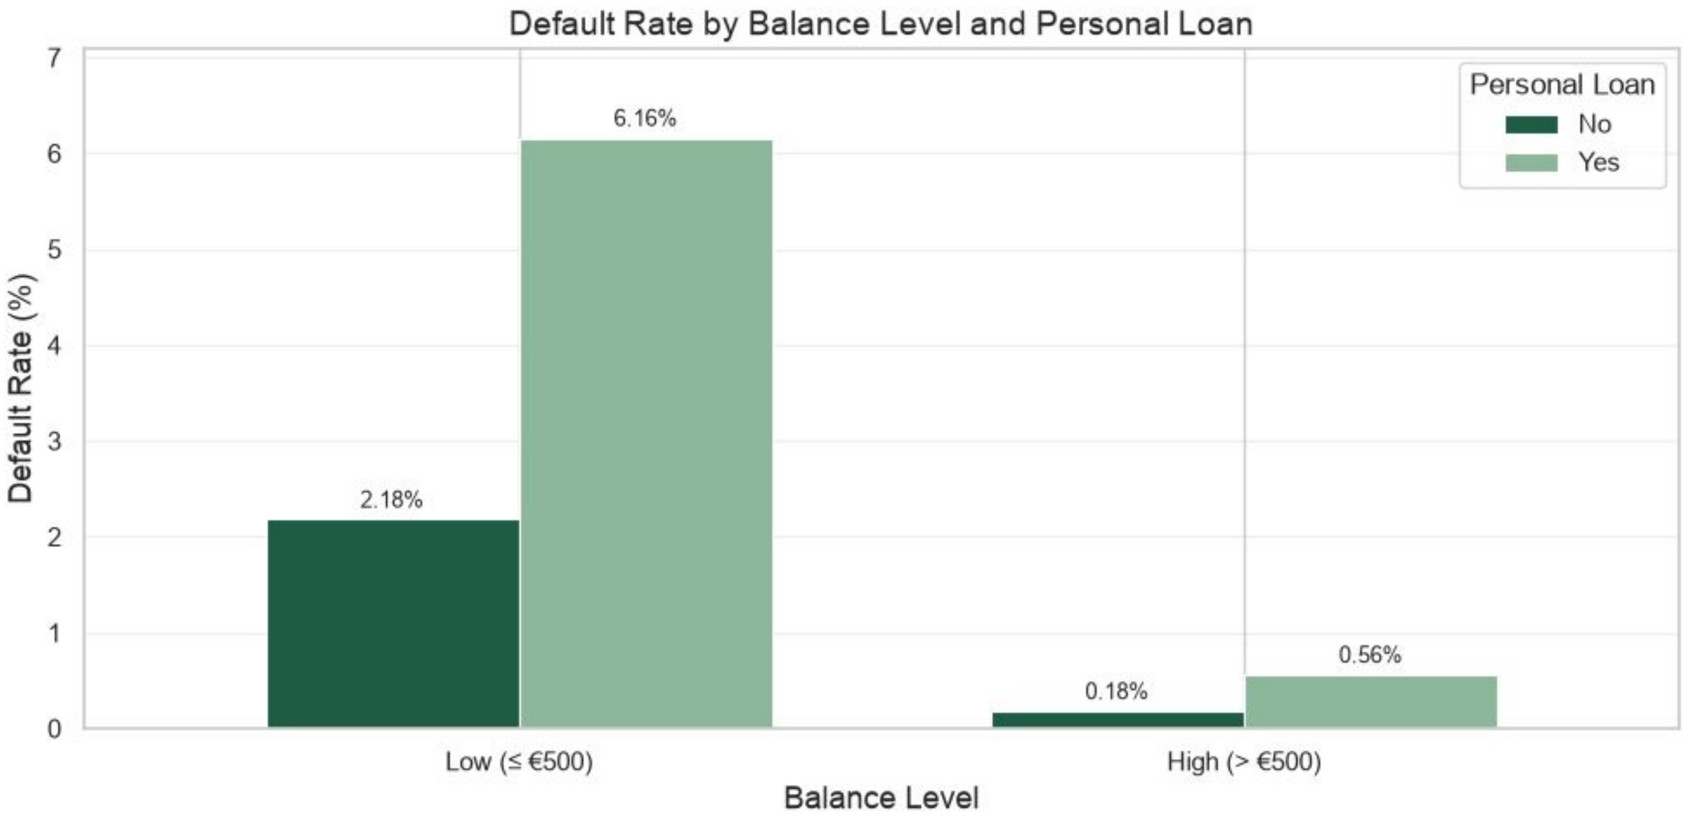




## Key finding

- Lower account balances are linked to significantly higher default risk, with Q1 customers exhibiting 60×+ higher default rates than Q4 customers

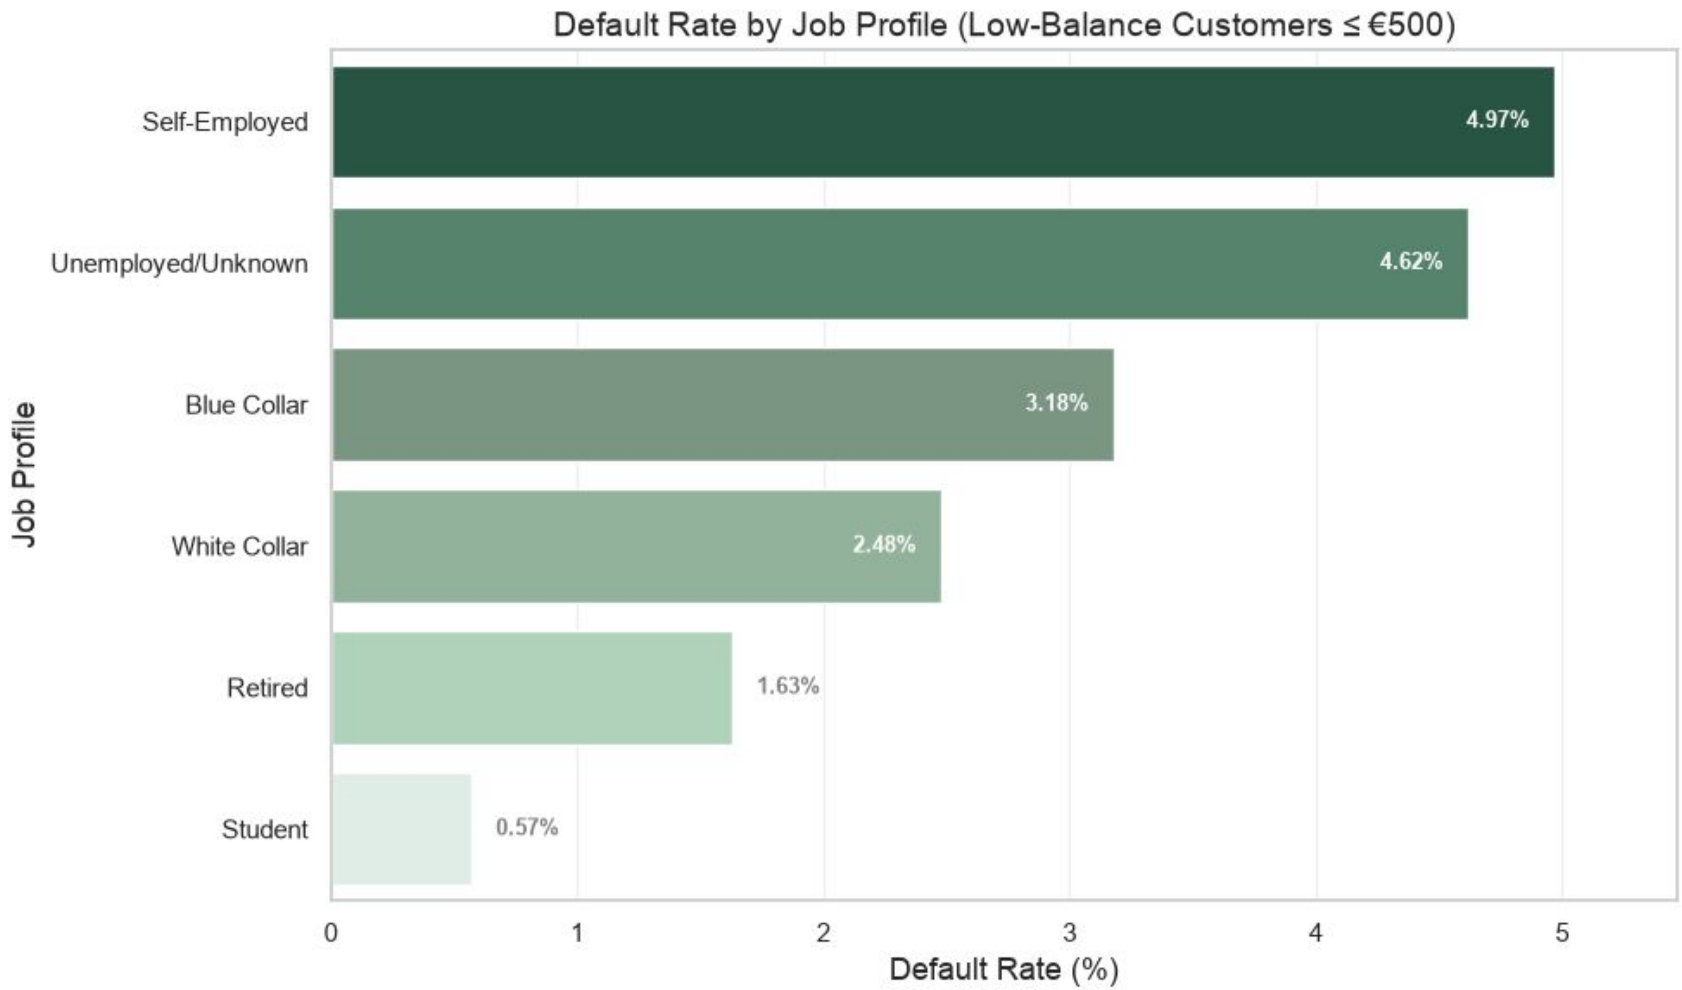
# Risk Interaction



## Key findings

- Low balance and personal loans drive the highest default risk. customers with a loan

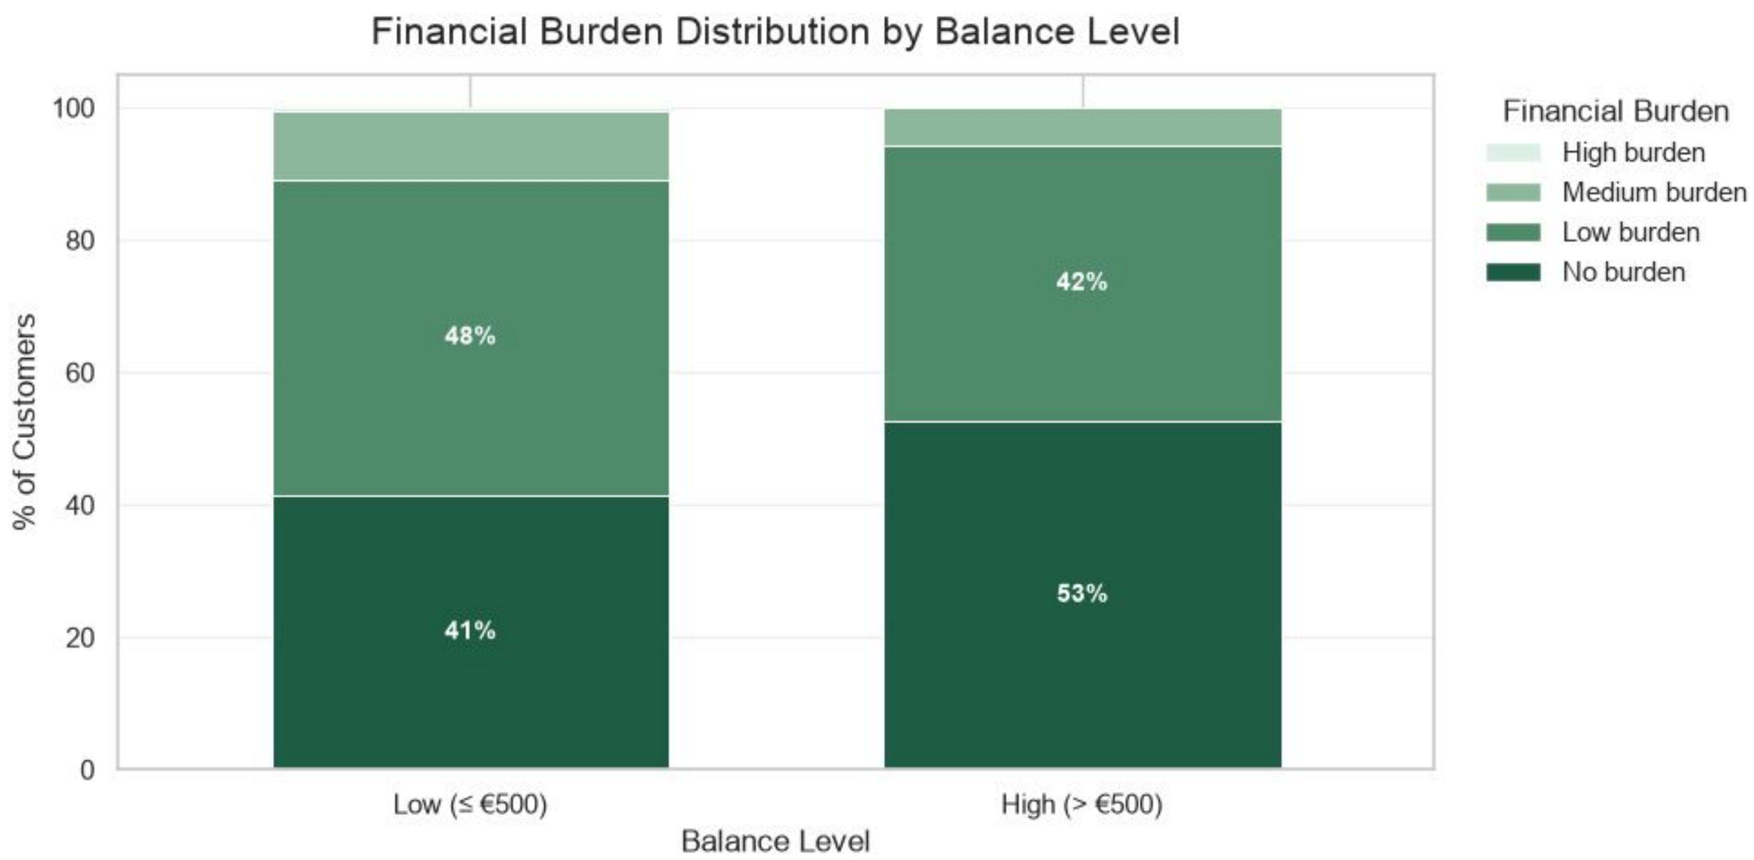
# Risk Interaction



## Key findings

- Self-Employed, Unemployed/Unknown, and Blue-Collar customers are the riskiest low-balance segments.

# Default Rate by Financial Burden



**Key finding**

- Low balance + medium financial burden = highest default risk (~15%)

Banco Atlas

# Conclusions

**YES, Account balance** appears to be **the strongest risk indicator** in this dataset

| Key Finding | Business Action |
| --- | --- |
| Lower balance is associated with **higher default risk.** | Use balance as a primary risk indicator in scoring and decision models. |
| Low balance combined with a personal loan shows the **highest default risk.** | Require additional review and stricter approval criteria for these customers. |
| Balance segments clearly separate customers by **risk levels.** | Apply tiered credit policies based on balance segments to manage risk effectively. |
| High balance combined with no personal loan is linked to the **lowest default risk.** | Fast-track approval and offer preferential terms for these low-risk customers. |

# Appendix

Customer Profile | Finance and Credit Risk

# Policy Recommendations

| # | Policy | Trigger condition | Recommended action | Rationale |
|---|---|---|---|---|
| 1 | **Mandatory manual review** | Balance ≤ €0 | Analyst approval | Highest risk (7.0%) |
| 2 | **Reduced credit limit** | Balance €0–500 | Limit to 50% | High risk (2.8%) |
| 3 | **Enhanced scoring weight** | All applicants | Increase balance weight | Strongest predictor |
| 4 | **Compound-risk flag** | Balance ≤ €500 **and** personal loan = yes | Extra guarantees | Highest-risk segment |
| 5 | **Occupation-based review** | Balance ≤ €500 **and** job profile ∈ {Self-Employed, Unemployed/Unknown, Blue Collar} | Financial review | Higher default risk |
| 6 | **Burden-aware monitoring** | Balance ≤ €500 **and** Medium/High financial burden | Restrict new credit | Very high default |
| 7 | **Preventive outreach** | Balance in Q1 quartile, no current default | Financial counselling | Prevent future default |
| 8 | **Standard/fast-track approval** | Balance > €3,000, no personal loan | Standard process | Very low risk |

Banco Atlas

# Limitations & Next Steps

🟩**Class imbalance:** Only 155 defaults in ~10,630 records — segment rates for small groups (e.g. Q4 with 2 defaults) should be interpreted with caution.

🟩**Observational data:** This analysis shows association, not causation. A customer's low balance may reflect prior financial distress rather than cause future default.

🟩**Financial burden index:** Includes current default status by design — useful for portfolio review, but balance + loan/housing should drive forward-looking credit decisions.

🟩**Recommended follow-up:** Validate policy thresholds with the Client Profile analysts and test approval rules on new incoming applications.
